Statement: TEC7 suitability for air vent sealing

The product TEC7 is fit for use as a sealant and adhesive for HVAC applications such as air ventilation ducts. The basis for this statement is:

- TEC7 has a strong adhesion on the materials used for air ducts (steel, aluminum, PVC, …)
- It is a permanently elastic sealant that can cope with long term thermal expansion and crimp.
- TEC7 is tested by SKG/ IKOB as a air tight sealant according to EN 12114. TEC7 is rated airtight up until 4 mm under positive and negative air pressure to 1000 Pa.
- TEC7 has been tested by RISE Research Institutes of Sweden as an effective Radon barrier. This is an extra proof of gas tightness.
